Alpine Ascents

An Educational Mountaineering Website

Faculty: Miss Summaiya Aslam | Batch: 2605 C1 | Group: B

Serial No.	Enrollment Number	Student Name
1	Student1730807	Uzair Naufil
2	Student1731035	Muhammad Ahmed
3	Student1731033	Riyan Ahmed
4	Student1731034	Syed Khizar Muhammad

ABOUT THIS GUIDE

Alpine Ascents is a single-page educational mountaineering website. It covers history, types, techniques, shelter, hazards, records, clubs, success stories, a gallery, latest developments and guidelines — all on one continuous page with scroll-driven storytelling.

Live site: <https://alpineascents1.netlify.app/>

This guide walks through each section of the site with a screenshot and a description of what the visitor can do there.

FOLDER STRUCTURE

Alpine Ascents

HISTORY

From a single summit in 1786 to fourteen eight-thousanders: five turning points in the story of mountaineering.

1786

The first ascents

THE FIRST ASCENT OF MONT BLANC

On 8 August 1786, Jacques Balmat and Michel-Gabriel Paccard reached the summit of Mont Blanc, the highest peak in the Alps. A prize offered by the scientist Horace-Bénédict de Saussure had encouraged the attempt. Many people date the beginning of mountaineering as a sport to this climb.

lands 8,611 m ■ 14 peaks rise above 8,000 m ■ Mont Blanc was first climbed in 1786 ■ Today: Sat, 3 Oct 2026 ■ Time: 11:09:19 ■ Location: permission not given ■ E

Five turning points in mountaineering history from 1786 to today. A sticky year counter animates as you scroll through each era.

TYPES AND STYLES

Not every climb is the same. Four styles of mountaineering, each with its own terrain, tools and skills.

ALPINE CLIMBING

Climbing big mountain routes over mixed ground of snow, ice and rock. Climbers usually go fast and light, often reaching the summit and returning in one push or a few days.

Terrain Snow, ice and rock at altitude

ROCK CLIMBING

ICE CLIMBING

EXPEDITION CLIMBING

TECHNIQUES

Four core skills every climber learns before going high.

Step 01

ROUTE FINDING

Study the mountain before you climb it, using photos, maps, guidebooks and the day's conditions. Choose a line, find the hardest section, and note where you can escape.

- Read the terrain: ridges, gullies, glaciers and cliff bands
- Know your turnaround time before you leave
- Recheck the route as you climb, because conditions change

Watch out: Following footprints or a line of ropes without checking where they lead.

peaks rise above 8,000 m ■ Mont Blanc was first climbed in 1786 ■ Today: Sat, 3 Oct 2026 ■ Time: 11:10:27 ■ Location: permission not given ■ Everest stands 8,849 m

Four core skills: Route finding, Anchoring, Belaying and Rappelling. Each has key points and a 'Watch out' warning, with a crossfading photo and step counter.

SHELTERING

Where climbers sleep, rest and wait out the weather.

MOUNTAIN TENT

A four-season mountain tent is built to shrug off wind and the weight of snow. Pitch it on flat, sheltered ground and guy it out well.

Best for: camps on snow and glaciers.

SNOW CAVE

BIVOUAC

HAZARDS

The mountain does not negotiate. Four hazards every climber must respect.

AVALANCHE

A slab of snow releases and slides down a slope, often triggered by the climber. Most avalanches that catch people happen on slopes of about 30 to 45 degrees, especially after heavy snowfall or wind.

ids 8,849 m ■ K2 stands 8,611 m ■ 14 peaks rise above 8,000 m ■ Mont Blanc was first climbed in 1788 ■ Today: Sat, 3 Oct 2026 ■ Time: 11:11:16 ■ Location: permi

LATEST DEVELOPMENTS

Recent news from the world of mountaineering, with dates and sources.

September 2026

Climate

A SWISS GLACIER IS DECLARED EXTINCT

Bella Tola Glacier, near Saint-Luc in Switzerland, was officially declared extinct in August 2026 after almost completely disappearing, following a thin winter snowpack and several summer heatwaves. Researchers at ETH Zurich and Vrije Universiteit Brussel have launched a public map showing when individual glaciers are projected to vanish. A UNESCO and WMO report in late 2025 found that glaciers worldwide have lost more than 6,500 billion tonnes of ice since 2000.
